

The Healing Heaven Post-Surgical Management with Homoeopathy

Many patients of mine nervously anticipate their upcoming surgery, and will often ask me in advance what remedies they need to have on hand to help recover after surgery. Sometimes they become confused about whether Arnica is safe around having surgery. But not every post-surgical case is Arnica!!!

Let's examine a case

A man undergoes operation of Hemorrhoid in June 2006 by Cryotherapy i.e. freezing piles by liquid nitrogen. Within 7 days post-surgery he develops following complaints

- 1) A small blister near site of surgery which is very painful.
- 2) Lot of inflammation around surgical site with swelling and tenderness
- 3) Loss of sensation while passing stool.
- 4) Total loss of erection post-surgical.

Post-surgical he was on antibiotics, pain killers and stool softeners but it did not help him much.

I took the case as an acute case of post-surgical complication using following rubrics.

RECTUM - SWELLING of anus
GENERALS - CONVALESCENCE; ailments during - surgery; after
GENERALS - CONVALESCENCE; ailments during - burns; after
RECTUM - INVOLUNTARY stool - physical causes rather than from emotional causes; from
RECTUM - INVOLUNTARY stool - paralysis; from
RECTUM - UNNOTICED stool
RECTUM - INFLAMMATION - Anus
MALE GENITALIA/SEX - ERECTIONS – wanting

I selected causticum 30c based on h/o burns by cryosurgery 3 doses a day for 4 days, she immediately felt better in pain and swelling but sensation of stool passing did not come back, then I took help of this rubric **RECTUM - INVOLUNTARY stool - physical causes rather than from emotional causes; from** and selected aloe 30c 3 times a day for 15 days which completely resolved the issue and there was no pain nor swelling and no loss of sensation.
